The use of the three former Tables of use upon use, according to the rate of 6 in the hundred.

FOr the first, if you would know to how much one pound stock amounts (at Interest upon Interest) in any number of years not exceeding 31, seeke the number of years in the first Columne towards your left hand, under this word years, and there directly against the same, you shall see the Sum desired.

Example.

Admit it be required to know how much 1 l. stock amounts at Interest upon Interest in 21 years, look 21 under the word years, and directly against the same you shall see 3 l. 7 s. 11 d. 2 q. which is the summe desired.

But suppose the Question were to finde the increase of 10 l. stock in the same time, multiply the same by 10, or adde the same 10 times together, which makes 33 l. 19 s. 7 d. which is also the summe desired. And thus may you work upon any summe desired in any of the other Columes observing the manner as is before, as the Propositions nominated in the head of each columne doe direct, and thus much for compound Interest.

Now for simple Interest direct, I have composed the following Tables, at the rate of *6 per centum*, whose use is thus. Seek the sum desired, and under the same, you shall have the Interest due for one year, or any time under, namely from one moneth to 11 as is there expressed which of it selfe, is so plain, that it needs no further explanation.

Intereſt at *6 per Centum* for 500 li. is for each moneth as followeth.
